PROFILE

Final-year BSc Computing Systems student at Ulster University London. Designs, builds and deploys production-grade Generative and Agentic AI solutions, RAG pipelines, ReAct agents with live tool use, and ML APIs served via typed endpoints. Combines strong Python engineering with hands-on LangChain, ChromaDB, and LLM API experience. Seeking a first commercial AI engineering role to apply these skills in a professional services environment.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, SQL (MySQL)
Generative & Agentic AI: LangChain, Groq LLM, Anthropic Claude API, OpenAI API, RAG pipelines, ReAct agents, prompt engineering, hallucination mitigation, ChromaDB, Embeddings
Engineering and Deployment: FastAPI, Docker, Git, GitHub Actions (CI/CD), pytest/JUnit, Pydantic, Streamlit
Process: Agile/Scrum (Scrum Master experience), Figma, Trello, sprint planning

PROJECTS

Football Research Agent – ReAct AI Agent | Python · Groq · LLM · Tavily · Streamlit

- Designed and deployed a ReAct (Reasoning + Acting) agent that autonomously searches the web, reasons over retrieved results across multiple iterations, and delivers grounded, sourced answers, never relying on training data alone.
- Solved a production hallucination problem: identified that the model was fabricating news articles with fake dates and scores; fixed by injecting temporal context into the system prompt and enforcing strict observation-only answering rules.
- Implemented multi-step tool orchestration: agent parses its own output to extract search queries, executes Tavily web search, injects results back into context, and loops until confident, up to 5 iterations.
- Deployed as a Streamlit chat interface with conversation history, session management, and token management for free-tier LLM APIs.

Career Intelligence Assitant – RAG Application | Python · LangChain · ChromaDB · Groq · Streamlit

- Built end-to-end RAG pipeline: PDF ingestion, recursive chunking with overlap, HuggingFace sentence-transformer embeddings, ChromaDB vector store, semantic retrieval and then LLM-grounded answer generation.
- Engineered Streamlit session state to persist vector store across reruns; implemented file-change detection to avoid redundant reprocessing, production-grade efficiency considerations.
- Deployed publicly on Streamlit Cloud; accessible to any user without a Python install.

Genova Perfumes — Full-Stack Production System | PHP · SQL · JavaScript

- Security-first architecture: CSRF tokens, HMAC-SHA256 webhook verification, bcrypt auth, atomic stock deduction, idempotent Stripe webhook processing and resolved concurrency issues.
- 107 manual test cases; 18 bugs resolved including duplicate refund prevention and concurrent checkout race conditions.

EDUCATION

BSc (Hons) Computing Systems — Ulster University, London Sep 2024 – May 2027
Predicted Classification: First Class | Year 1 & 2 Average: 75%+ | **Dean's List Recipient 2024–2025**

WORK EXPERIENCE

Barista — Starbucks, Brompton Road, London Nov 2024 – Present

- Maintained Dean's List academic average while working 15–20 hrs/week; trained two new team members; sustained accuracy across 100+ transactions per shift under time pressure
